

LINE DRAGON

PUMP HOSE DRAGGER &
CONCRETE PLACER SYSTEM

- Self-Propelled
- Work in Tandem
- Single Operator
- Radio Remote-Control
- 13 HP Gas Engines
- Increased Production
- Reduced Labor
- Accepts 4" or 5" Line
- Qualified, Safety-Trained Operators
- Heavy Duty Components

LINE DRAGON

PUMP HOSE DRAGGER & CONCRETE PLACER SYSTEM

These units are powered by 13 horsepower gas engines and work in tandem to increase production (up to 60%) and reduce labor cost and injuries. Each unit weighs only about 1200 pounds and will easily maneuver over rebar, radiant heat lines, nelson studs, floor decking, and other prepared surfaces. Both machines move forward, backward, left, right, and oblique. The placing boom rotates 360 degrees for complete concrete placement control. The placer is attached to the delivery line end while the dragger keeps excess line out of the pour area 20' away. The radio-controlled machines are equipped with fully hydrostatic controls, allowing operators to be more efficient and work at a safer distance. Can accept a 4" or 5" line. Qualified, safety trained operators.

MODEL SPECIFICATIONS

Weight			Engine		
	Placer	1250 lbs.		Type	Honda
	Grabber	1200 lbs.		Power	13 HP
Overall Width		51"	Hydraulic Tank Capacity		5 Gallon
Overall Length		69"	Tire Size		18 x 18 x 9.5-8
